Beautiful Lake Tahoe

There are many beautiful places to visit in the United States. In fact, there are too many to name! One of the most beautiful places I

have ever visited, though, is Lake Tahoe. Keep reading to learn more about this wonderful place.

Lake Tahoe

Sitting on the California and Nevada border, Lake Tahoe is nestled among the pine trees of the Sierra

Nevada Mountains. It is a fresh water lake that is over 1600 feet deep at its greatest depth, making it the deepest **alpine** lake in our country. Due to its crystal clear waters and setting among the

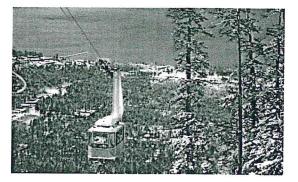

alpine – relating to high mountains

forests of the Sierra Nevada's, Lake Tahoe has become a very popular place for people to visit.

All year long, you can find things to do up at the lake. For instance, during the summer, you can visit any one of the many beaches and take a dip in the refreshingly cool waters. There are also many popular hiking trails that circle the lake. In the wintertime, you

can ski the slopes that surround the lake or snowshoe the trails. No matter what season, you are sure to enjoy the beauty of Lake Tahoe.

If you want to visit somewhere new on your next vacation, Lake Tahoe should be at the top of your list! Trust me, you will love it!

Sunny Las Vegas

Nevada may be one of the larger states in our nation, but not many people live in the state! Its largest city lies on the floor of the Mojave Desert and is named Las Vegas. People young and old love this thrilling place.

Las Vegas is a resort city. This means that people go there to get away from it all. It also means that the city of Las Vegas largely depends upon tourism. Las Vegas was founded in 1905 and within a few decades was booming with casinos.

Casinos are businesses where adults go to gamble on slot machines and play other types of card or dice games.

Since casino-style gambling is not allowed state-wide in any other state, except Louisiana, people like to visit Las

tourism—
the activity of traveling
to a place for pleasure

At first Las Vegas was a place that only adults could enjoy, but over the years, the city has worked hard to come up with entertainment that could be enjoyed by families as well. For example, many of the casinos now

have areas for families, like large arcades, and shows that all can enjoy. There are also many museums and beautiful parks you can visit as well. A favorite of many is the Springs Preserve, which has fun exhibits that people of all ages can enjoy.

But, besides the glitz of the casinos, just what exactly makes Las Vegas such a great place to visit? Well, Las Vegas is also known for its year-round sunshine! Seriously! The city averages almost 300 days of sunshine a year, with hot summers and comfortable winter temperatures. So, if you're looking for an exciting place to see while visiting the great state of Nevada, add Las Vegas to your list! It's quite the spectacle!

Nevada's Symbols

I was born and raised in the state of Nevada and I love my state very much! Today I want to tell you about some of the symbols of my great state.

First of all, the state bird of Nevada is the mountain bluebird. Mountain bluebirds are medium sized birds that are bright blue on their backs and lighter blue on their bellies. They like to live in the mountain areas of western North America and are also the state bird of Idaho. It was chosen as the state bird of Nevada in 1967.

Another symbol of the state of Nevada is the desert bighorn sheep, Nevada's state animal. Desert bighorn sheep are great

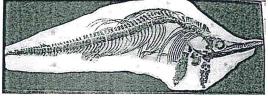

mountain climbers which is why they are able to live in places like Nevada and California. They eat mainly grasses and plants, but they can use their horns as tools to break open cactuses as well. In California, the desert bighorn sheep is protected because it is endangered.

The last symbol I will tell you about is the state

fossil. Yes, Nevada has a state fossil, isn't that cool? Our state fossil is the

Ichthyosaur. It was named a state fossil in 1977 because Nevada is the only state that has a complete Ichthyosaur skeleton. An Ichthyosaur is a water reptile that lived about 200 million years

ago and they were pretty scary looking! They had sharp teeth and big eyes and could grow up to 30 feet long.

Ichthyosaur fossil

Nevada has many other great symbols if you are interested in looking them up. I hope you enjoyed learning about these three!

The Hoover Dam

Have you ever wondered why people build dams? Well, one reason is that they can be a source of power for communities. The Hoover Dam, just outside of Las Vegas, Nevada, is an example of a dam that provides power for millions of people. Read on to learn more about the Hoover Dam.

The Hoover Dam is a huge dam located on the border of Nevada and

Arizona. It is the second tallest dam in the United States, but it is the tallest one made only of man-made materials. It took five years to build and is over 1200 feet wide. The dam was built upon the Colorado River, creating Lake Mead, the largest reservoir in the United States. When the dam was being built in the 1930's, so many people were needed to do the work that an entire city had to be built in southern Nevada. This city was named Boulder City and still stands today with a population of about 15,000 people.

Fast Facts

What is a reservoir?

A reservoir can be a natural lake or man-made.

They are used as a water supply for communities.

Do an Internet search to find out where the closest reservoir is to your community.

As stated in my introduction, the Hoover

Dam is important because it gives power to so many people. If you live in southern Nevada, southern California, or Arizona, you may be receiving power from the Hoover Dam. Lake Mead, the reservoir that was created when the Hoover Dam was built, helps to give water to over 20 million people. As you can

see, the Hoover Dam is very important to many people.

Dams are built for many reasons, but one of the most important reasons is to supply power and water for people. The Hoover Dam is an example of why people need to build dams.

The Biggest Little City

Reno, Nevada, found in the northern part of Nevada, near the California border calls itself "The Biggest Little City," a nickname that is now known across the country. Reno is the second biggest city in Nevada and is a one-of-a-kind place!

Reno was officially founded in 1868 as the transcontinental railroad was being built. By the 1930's, Reno was known for its legal gambling and this is where many people think that the motto of "The Biggest Little City" started. Reno has never been a very big city, like Las Vegas or San Francisco, but it offers some of the things you can find in big cities, like casinos. Casinos are a very important part of the culture in Reno and many people work in the casinos.

Understanding Casinos

Have you ever made a bet
with a friend about
something? Maybe you bet
about who would win the
Superbowl or who is the faster
runner?

Well, adults go to casinos to make bets. Only their bets all involve money, which is why kids aren't allowed to gamble in casinos!

When you gamble, you take a chance to win or lose. When you lose, the casino makes money!
Gambling can be fun for adults, but even grown-ups have to be careful not to gamble too much!

Although Reno does not offer all of the lights and sounds of Vegas, there is still much to see and do there. For instance, Reno is only about a thirty-minute drive from beautiful Lake Tahoe, where you can relax on the beach in the summer and go skiing during the winter. Also, the Truckee River is a favorite place for people to do things, like kayaking. There is a kayak racing course in downtown Reno where people from all over the country come to compete. If you are a golfer, Reno is a great place to visit. There are dozens of great golf courses in Reno and the surrounding areas.

If sports activities aren't something you are interested in, Reno is also known for the many great events the city holds year round. No matter what time of year, something is always going on in Reno! From the Great Reno Balloon Races or the Best in the West Rib Cook Off, to Hot August Nights and Street Vibrations, there is something for everyone in Reno!

Reno is home to over 200,000 people and welcomes thousands of visitors every year. It has a lot of things to offer, just like any big city, but is still small enough so you never feel lost, truly making it the "Biggest Little City!"

Carson City: Nevada's State Capital

Unless you are from Nevada, most people, when asked, think that the state capital of Nevada is Las Vegas, or maybe even Reno! Native Nevadans though always know the answer to this question: Carson City! Today, I will tell you some interesting facts about our state's capital.

Carson City is a small town in northern Nevada, about a thirty minute drive from Reno, and very close to Lake Tahoe. The population of Carson City is only about 54,000 people; so as you can see, Carson City is not a very big place. So, why was it chosen to be the capital of Nevada then, you might ask? Well, part of the answer to that may be that Carson City was founded before Reno, and decades before Las Vegas. Out of these three cities, it was the only one that had already been founded when Nevada first became a state. It would be kind of hard to name a city the capital if it didn't even exist yet!

Although Carson City is pretty small, there are many interesting things to

Capitol Building

see and do there. Obviously, you could, of course, visit the Nevada State Capitol building. Also, the Nevada State Railroad Museum is in Carson City. Anyone who loves trains would be interested in visiting this museum. Finally, if you like a little bit of mystery, maybe you would like to visit Bower's Mansion. This historical home was built in the 1860's and is about a fifteen-minute drive from

warned: many people think this house is haunted!

Carson City may never be able to compete in size with other state capitals, like Phoenix or Denver, but there is still plenty to see and do! And, now you know that Carson City, NOT Las Vegas, is the state capital of Nevada!

Basket Weaver: Dat So La Lee

Basket weaving is an art that has always been very important to the Native American people. Dat So La Lee was a native Nevadan who became a very famous basket weaver. In this essay, I will tell you a little bit about her life.

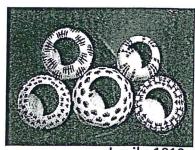

Dat So La Lee was born in northern Nevada during the early 1800's. Most people believe she was born in 1929, but the exact date of her birth is not known because there is no exact record of it. Her real name was Louisa and she was a member of the Washoe people, a Native American tribe that lives in Northern Nevada and California. Louisa did not have the happiest of childhoods. She was made fun of because of her weight and did not have very many friends. She spent a lot of her time watching her mother weave baskets and this is how she learned how to be a basket maker herself. Louisa began to use the name Dat So La Lee as her basket weaving became more popular. Her baskets were sold by a man named Abram Cohn. He and his wife took care of Dat So La Lee so that she could focus only on making her special baskets.

Why are Dat So La Lee's baskets so special? Well, baskets were very popular during that time period and the baskets of Dat So La Lee were very beautiful and tightly woven. Also, today her baskets are very rare. There are only 120 known baskets that she made and at least 20 of them are now kept in museums in Reno and Carson City. It took her years to make just one basket because she wanted each basket to be absolutely perfect. If you were able to

get your hands on a Dat So La Lee basket today, you may be able to sell it for hundreds of thousands of dollars!

Before she died, Dat So La Lee had asked to be buried with one of her baskets. So, in 1925 she was buried in Carson City, Nevada, with one of her baskets. She lived to be 96 years old. Her baskets are some of Nevada's greatest treasures. Maybe you will get a chance to see one someday!

Animal Life Cycles

All living things experience the same general life cycle: come to life, grow, reproduce, then death. Each of these stages looks slightly different for different types of animals. Mammals, such as humans, undergo a live birth when they enter the world. They require the care and nourishment (milk) of their mother anywhere from a few months to a few years after birth. Most mammals don't experience metamorphosis, or series of changes. They look like the adult form of their species and they will eventually grow to become an adult. After they reproduce, they will ultimately grow older and die. There are many species of animals that do not experience life in the same way as mammals.

Instead of a live birth, many animals hatch from eggs. After hatching, they may experience a few changes as they grow and become adults. There are a couple of ways these changes can happen.

Complete Metamorphosis

Complete metamorphosis includes 4 life cycle stages: egg, larva, pupa, and adult. Animals that

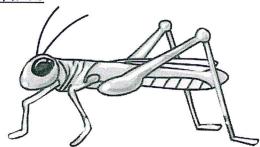

undergo complete metamorphosis hatch from an egg into a worm-like form called larvae. A larva will travel around, eating plants and preparing for its next change. When it is ready, the larva will find a safe spot, usually on the underside of a leaf, and form a chrysalis. This life cycle stage is called the pupa. A chrysalis will protect the animal as it changes to its next form. Once the animal has become an adult, it will break through the chrysalis and emerge in its adult form. The animal will look very different from stage to stage. One example of an animal that goes through complete metamorphosis is the butterfly. It

hatches as a caterpillar, then eventually becomes an adult butterfly.

Incomplete Metamorphosis

Incomplete metamorphosis is a bit different from Complete metamorphosis. Animals will still hatch as an egg. Unlike complete metamorphosis, the young animal looks very similar to their adult form. This stage is called a nymph. The only difference between the nymph and the adult is their size and nymphs do not have wings. The nymph can grow by shedding its outer skeleton (exoskeleton) through a process called molting. As it

sheds, its body gets bigger and it will eventually grow wings. Once the animal grows its wings, it has reached its adult form and may start reproducing. Grasshoppers experience incomplete metamorphosis. They hatch from their egg looking just like the adult, except it is smaller and without wings. As it molts its outer skeleton, it continues to grow and eventually grows wings and becomes an adult. Now the grasshopper can reproduce.

Every living organism experiences a life cycle. They go through stages in their life as they age and grow to become adults. While these stages may look different from organism to organism, they will ultimately achieve the same goals of growing up and reproducing.

Luz Sees the Light

Read "Luz Sees the Light" and answer each question.

- Why does the author most likely show a car driving by and disturbing Luz?
 - (A) to explain why she is hoping to spend the day indoors
 - ® to show why she wants a place to enjoy the outdoors in peace
 - © to show that there has been more traffic than usual in her neighborhood
 - to explain why her neighbors walk away when she tries to stop them on the sidewalk
- 2 Why does Luz think it is important to have a neighborhood farm?
 - (A) so she will have a chance to learn more about gardening
 - ® because she wants to prove it is possible to grow food in a city
 - © because she does not know that there are grocery stores nearby
 - so she will not have to depend on food that is shipped from far away
- 3 In the middle of the story, Luz begins to doubt herself and wonders if she is out to lunch. What does out to lunch mean as it is used in the story?
 - not thinking clearly
 - ® not moving quickly
 - © not supporting her friends
 - not listening to her parents

Name	Date		हु(च) (च । v			
		9	1,4	()[0][1(2 2	

- 4 Look at the pictures of the clock near the end of the story. How do these pictures help show how Luz is feeling?
 - A They show that she is tired from all the work she has done and wants to sleep later.
 - ® They suggest that she is worried about her project because she is running out of time to finish it.
 - © They suggest that she is excited about the party because she is counting the minutes until it begins.
 - They show that she is thoughtful toward her friends because she wants to make sure they have time to see the park.
- What is a main theme of the story?
 - Tricky tasks demand careful planning.
 - ® It is important to be hopeful about the future.
 - © Projects are often more difficult than they seem at first.
 - People should work together to be sure they get what they need.
